So you need to declare Controller before using these methods. You can read the source code. Please read file Controller.h or Controller.cpp (If this class is not in the same file as the Controller.h, you can always right click on this Controller class and choose Open Declaration to see the content of the file). There are numerous applications where it is necessary to prepare one or more thin films of a metal or a metal oxide on the surface of an object. For example, in some applications a thin film of a metal or a metal oxide is coated on the surface of an automobile fender in order to prevent the fender from corrosion. A thin film of a metal or a metal oxide can also be applied to the surface of any other object. However, most applications which require preparation of a thin film of a metal or a metal oxide on an object also require the metal or the metal oxide layer to be a very thin layer (i.e., as thin as possible) in order to ensure the best possible performance of the coated object. Thus, in many applications, the minimum thickness of the metal or the metal oxide coating is a matter of the structural, aesthetic and/or performance requirements of the coated object. In order to ensure that a metal or a metal oxide can be prepared in a 2d92ce491b
