i was suppose to be able to just download it and get it working just like that. when i downloaded the game, steam says "You have a cd key for this game. " but when i try to enter it it says the serial number is incorrect and i cant find it anywhere. help!! I don't see a cd key anymore, which I am supposed to use to activate the game? I have never had this problem with any of the other games I have bought through steam. Can't figure out what to do. Please help . EDIT: I fixed it by using the console to remove the expired cd key: steam cd Spellforce: Platinum Edition.\ Once i did that it let me add the cd key and get the game working. I have no idea how I did it and why it was needed, but it worked for me! A: If you've just bought the game and it won't let you activate it, you've probably entered the wrong serial number. I'm not sure if your CD key has expired and Steam decided to make it disappear, but if the serial number you're entering isn't the same number you had before, it'll probably say "CD key is expired", even if it isn't. Simply try again, and if that doesn't work, try another serial number. And if that still doesn't work, then maybe try contacting Steam Support. If the game wasn't activated because you entered the wrong serial number, then contact Steam Support and they'll send you a new one.
