I am using the legend\_box option in ggplot2 with library(ggplot2) ggplot(iris, aes(x = Sepal.Width, y = Sepal.Length, col=Species)) + geom\_boxplot(outlier.size=1) + scale\_fill\_grey() + guides(col=guide\_legend(override.aes=list(colour=F))) I would like to know if there is a way to prevent the legend from displaying. The original plot looks like: but the legend looks like: Thanks. A: The legend in the middle was not displayed because the boxplot was done using default colors instead of 'grey'. The following code works. ggplot(iris, aes(x = Sepal.Width, y = Sepal.Length, col=Species)) + geom\_boxplot(outlier.size=1, col='grey') + guides(col=guide\_legend(override.aes=list(colour=F)))
