FIG. 1 is an exploded, isometric view of a print cartridge according to an embodiment of the present invention. The view shown in FIG. 1 shows a form of a print cartridge 20 adapted to have an openable cover 30 hinged to the print cartridge at hinge 41. A feed plate 52 is received in a print cartridge holder 55. A print head 60 is fixed to the print cartridge and a print ribbon 64 is wrapped around a portion of the feed plate 52 and the print head 60. The cover 30 is held open by a retainer 35 as the printer 1 prints. One problem with this type of print cartridge is that a user may open the cover 30, damage the feed plate 52 and print head 60 and ribbon 64. There is a need to protect the feed plate 52 and print head 60 and ribbon 64.

With this program you can write, compile, test, and execute programs using on-screen help and templates. You can use this tool to study the Cobol programming language. You know, there are only a handful of people who I think have a shot at being on the list next year. It's the younger/no frills/high end. Guess who... Goldfinger, with his dual 06/07 and all the extra high-end mods on it is my dream boat. But just like that list, he's \$120k, not about to budge on price. Loon, with his Vertex... \$120k is as high as he can possibly go without 5.8 gearing. Q: Call method on all of class when one object is clicked I have the following code and I want to do the following: When any of the CardButtons are clicked I want all of them to trigger the click method. Right now only one of them works. I'm assuming that if the button is clicked, then the card.click() is triggered and if that is true then the class functionality is executed. The issue is that I need to be able to trigger all of the cards when just one is clicked.
